Subject: RE: Hen harrier and FPM data updates

Hello Katherine

Please find attached an update to NPWS's HLNAs for the Hen Harrier SPA Network based on data from 2010, 2015 and 2017. The latter year of data is sourced from the DAFM EIP. Another year of such data will go a long way to quantifying further the predictive power of such areas to contain future nest sites. For this year I consider it prudent to go with version v2 as described in the attached report. Please note that both the shape files and the report is considered to hold sensitive data and so should be treated appropriately.

I am happy to discuss this further with you.

Best regards

David
