

* Licence failed to close door, problem with fan extraction. Licence went to dwelling house & ask newelged & fix issue.

EPA couldn't go to site so can't say official non compliance

→ Farmer's intention spread ^{and} digstle better than surry site near SAE

* By slaughterhouse, takes wind (down and cross wind)

* 2 years later now I can request

* Examining an issue for a.d

Mainly dry (grain) input 98%.

Hydruen sulphate issue for a.d
→ by intake tank

* Regulated by DAPM direct input
x2, truck weekly

Sample sludge pro a.d → is there a gas? Will microbes in digester like it?

Primary tank → mixed xl hours (20) if gas x2

Mixed primary secondary
Flare only if too much gas in digester

Problems expelling gas poor grid connection

Primary → Secondary
(twice as much
↓
bigger tank)

1) Jan → 1/ October → spreadly season

↓
All Digestate → P1
